

# Lawson Digi-Dry Box

## DTG/Digital Ink Dryer

The Lawson Digi-Dry Box is a specialized dryer designed to properly cure water-base digital ink systems. It is compatible with all Direct-To-Garment printers and ink applications. Items cured in Lawson's Digi-Dry Box make DTG prints feel more like a traditional screen print than when cured via a heat press. The Lawson Digi-Dry combines powerful Quartz infra-red with a powerful air-evacuation system that pulls the moisture through and out of the garment, while curing the ink itself.

The Digi-Dry Box also cures plastisol ink even faster and minimizes scorching. An automatic timing cycle controls every aspect of the cure cycle. The energy-saving design turns the heat on and off automatically, so you don't waste energy when not curing a garment. Cure times typically range from 1-3 minutes, depending on ink deposit.

### Standard Features

- Quartz/I.R. Heat + Vacuumized Jet-Air
- Instant On/Off Cycles
- Digital Controls
- Cure area: 16" x 18"
- Adjustable Curing/Timing Cycles
- Sliding Cure Bed/Surface
- Floor Model
- Fully Insulated
- Lawson's "Cool-Touch" Sides
- Shipped Fully Assembled
- Custom Sizes Available
- 1 Year Parts Warranty
- 220 volts; 1-Phase Wiring

### Other Direct-to-Garment Equipment Available from Lawson

Lawson Pre-Treat Zoom XL  
Automatic Sprayer

Epson SureColor F2000  
DTG Printer

# Reasons to Buy a Digi-Dry Box Digital Dryer

## Simple and Easy to Use

The Lawson Digi-Dry Box is a direct-to-garment stationary/digital dryer for use with all digital water-base ink systems (and plastisol inks too). It is much easier and faster to load than a heat transfer press, and easier to operate - just press a button on the easy-to-use control panel to initiate the curing cycle. No "gorilla-strength" required to mash down a heat platen head, or air compressor required. When complete, it turns itself off.

You can also turn the boom-style control box where you want, so it's easy to see anywhere in your shop or office, or basement.

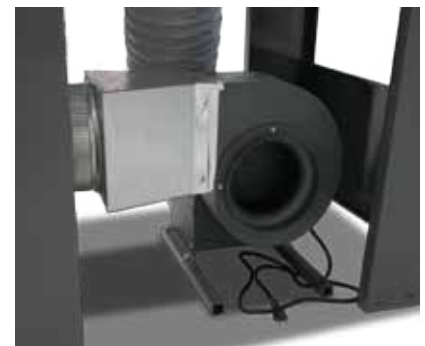

## Best Cure & Best Garment Feel Possible

Quartz Infrared and Vacuumized Jet-Air combine to pull the moisture through and out of the garment, while curing the ink itself, achieving the best cure possible for the widest variety of DTG printed items possible. In addition, your beautiful DTG print will feel more like a screen print (only softer); unlike if you use a heat press and mash the print until it gets stiff and brittle.

We estimate that most users will save 30% - 40% on energy-savings alone, because the quartz infrared turns off automatically when your item is cured. The heat is OFF when you are not actually curing!

The Lawson Digi-Dry Box will pay for itself in energy-savings alone in two years, not to mention the enhanced "feel" you'll achieve on the DTG print itself.

## Energy Savings

Because of Lawson's unique energy-saving design, when the Digi-Dry Box is not actually curing a DTG print, it costs you nothing, zero, nada! Unlike a heat transfer press that takes 10 minutes to warm up, and needs "recovery-time" between pressings, and then stays on all day (costing you lots of energy-money), the Lawson Digi-Dry Box only uses energy when curing. The rest of the time, it just looks pretty!

## Great Warranty

Dry with confidence, knowing that your Lawson Digi-Dry is backed by the best parts warranty available. The entire curing unit is under warranty for 1 full year - bumper-to-bumper...even the quartz tubes.
