50/50 White

**MCO-1397**  
Super Poly White

**WHICH WHITE INK IS BEST?**

**Q&A Session w/**

I want to buy some white plastisol ink.

What are you printing on? We have several different types of white plastisol ink.

100% cotton garments.

Then we recommend the Multi-Tech HPO-1550 Ultra White. This ink will print on 100% cotton and will not bleed on the shirt.

What if I have a 50/50 blend shirt on my next order? Will the HPO-1550 work for that too?

No, the 1550 will bleed on the 50/50 blend. Instead, use the MCO-1560 50/50 White.

Will either of those inks work on athletic dry tech material?

What is the fabric content?

100% Polyester.

Neither of those white inks will work. We have the MCO-1397 Super Poly White which is the only ink we have that will work on 100% Polyester.

What ink should I purchase if I want to carry just one white ink for cotton and cotton blended T-shirts?

The 1560 works great on both 100% cotton Tees and 50/50 blended Tees.
